

# COMMON DISINFECTANT TIPS

The time it takes for a disinfectant to kill germs (contact time) varies by product. Always check the product label for specific instructions.

## Label Instructions:

Always refer to the specific product label for accurate contact and dilution instructions

## Surface Wetness:

Ensure the surface remains wet for the entire contact time to allow the disinfectant to work effectively.

## Material Compatibility:

Some disinfectants may damage certain materials, so check compatibility.

## Dilution:

Proper dilution is crucial for effectiveness.

## Removing Organic Material

In order for any disinfectant to work, the surface has to be free of organic material
